

## PITTSBURGH'S DEPLORABLE BLACK LIVING CONDITIONS

Ralph Bangs, PhD<sup>1</sup>

February 23, 2021

For more than 25 years, benchmarking studies have shown that black living conditions in the Pittsburgh area are among the worst in urban America. The major studies are summarized below.

The Bangs and Hong (1994) study, *Economic Benchmarks*, found that the city of Pittsburgh had the fourth highest black poverty rate (41%) and fifth highest black unemployment rate (19%) among the 50 most-populated cities. The authors found that Allegheny County had the fourth highest black poverty rate (36%) and fifth highest black unemployment rate (17%) among the 50 most-populated counties. The black-white disparities for these city and county measures were also among the highest in America, so it was not the case that blacks had poor living conditions here because everyone had poor conditions.

In a more detailed study of the 50 largest cities, *Black and White Economic Conditions in the City of Pittsburgh*, Bangs and Hong (1995) found that Pittsburgh had the:

- Highest share of black households with children that were female-headed (69%)
- Highest rate of black males age 25-54 not in the labor force (31%)
- Third highest rate of black females age 25-54 not in the labor force (35%)
- Third highest unemployment rate for black males age 16-19 (42%)
- Sixth highest unemployment rate for black females age 16-19 (40%)
- Fifth highest unemployment rate for black males age 25-54 (20%)
- Seventh highest unemployment rate for black females age 25-54 (14%)
- Second highest poverty rate for black children under age 18 (57%)
- Highest poverty rate for blacks age 18-64 (35%)
- 15<sup>th</sup> lowest homeownership rate for black householders under age 65

For each of these measures, Pittsburgh's black-white disparities were also among the highest in the set of cities. In addition, the authors found that the unemployment rate for black youth age 16-19 and poverty rates for blacks age 0-17 and 18-64 were much higher in 1989 than in 1979.

In an update to the above studies, the *Black-White Benchmarks Reports* (Bangs, Alex, Hughes, and Shorter, 2004) found that among the 70 largest cities and 50 largest counties and metro regions, the Pittsburgh area had:

- Extremely high percentages of black elderly living alone (~55%), black youth age 16-19 not in school and not in the labor force (~17%), blacks age 0-17 and age 18-64 in poverty (~44% and ~28%), and black households with no motor vehicle available (~44%)
- Extremely low median earnings for black male and female part-time workers (~\$8,500 and ~\$8,000 year) and median value for black-owned homes (~\$49,500)

---

<sup>1</sup> Former Associate Director, Center on Race and Social Problems, University of Pittsburgh

More recently, the City of Pittsburgh's Gender Equity Commission report, *Pittsburgh's Inequality Across Gender and Race* (Howell, Goodkind, Jacobs, Branson and Miller, 2019), compared 90 cities and found that the following conditions in Pittsburgh were among the worst:

- Black maternal death rate (1.8/1000 pregnancies) and black death rates for males age 1-17 (1/1000 boys), women age 18-24 (1.6/1000), males and females age 25-64 (15/1000 and 7.8/1000), and males and females age 65-74 (76/1000 and 47/1000)
- Black male and female child poverty rates (63% and 55%) and poverty rate for black women age 25-64 (39%)
- Unemployment rate for black men age 25-64 (9%) and labor force participation rate for black men age 16 and over (47%) and black women age 16 and over (49%)
- The black male workforce in Pittsburgh is more concentrated in a small number of occupations than the black workforce in 99% of the cities
- College attendance for black women with a high school degree (>50%)
- Black boys and girls in public high schools who passed at least one AP test (0%)
- Black boys and girls in public high schools who took the SAT or ACT (7% and 11%)
- Police referrals for black boys and girls (5% each) in Pittsburgh's public schools

And last year the Center for Economic Development at the University of Wisconsin Milwaukee (Levine, 2020) released a study comparing urban areas on racial inequality. The report, *The State of Black Milwaukee in National Perspective: Racial Inequality in the Nation's 50 Largest Metropolitan Areas*, found that the Pittsburgh metro area was among the worst for:

- Black-white residential segregation index (66)
- Black median annual household income (\$33,121)
- Black household income as percentage of non-Hispanic white household income (50.6%)
- Black poverty rate (30%)
- Ratio of black poverty rate to white poverty rate (3.3)
- Blacks living in extreme poverty—less than 50% of poverty level (13%)
- Black children in poverty (45%)
- Black households living in census tracts with a 40% or higher poverty rate (14%)
- Black households with annual income of \$100,000 or more (9.9%)
- Black male age and black female age 20-24 employment rates (58% and 59%)
- Black male age and black female age 25-54 employment rates (67% and 72%)
- Black youth age 16-24 not employed and not in school (21%)
- Black male and female median annual earnings adjusted for regional cost-of-living (\$27,122 and \$23,841)
- Black male and female workers earning over \$40,000/year (19% and 15%)
- Blacks age 25 and over holding a college or advanced degree (20%)
- Black males who were born in 1978-1983 and were incarcerated in 2010 (13%)
- Blacks age 15-64 incarcerated in the central county of the metro area (2.3%)
- Black infant mortality in the central county of the metro area (13/1000 live births)
- Black deaths by homicide in the central county of the metro area (44/100,000 pop.)
- Black deaths of despair (drug abuse, alcohol abuse, or suicide) in the central county of the metro area (46/100,000 pop.)

Finally, national data for 2020 show that COVID has had devastating effects on blacks. For example, the national black age-adjusted death rate due to COVID is 3.6 times the white rate, and blacks have been hurt economically much more than whites.<sup>2</sup> We would expect no less harm among African Americans in the Pittsburgh area once more complete data are available.

The benchmarking studies above compared black conditions in Pittsburgh to black conditions in many other urban areas using a variety of indicators. The overall conclusion is irrefutable: a large part of the black population in the Pittsburgh area has had deplorable living conditions for many decades. Blacks in the Pittsburgh area continue to be extremely disadvantaged.

In terms of solutions, there are hundreds of actions that could be taken. For example, see the policy agenda in the *Vision for Black Lives*. This was produced by 170 black-led organizations in the nation and coordinated by the Movement for Black Lives (M4BL).<sup>3</sup>

I recommend that leaders and organizations in the Pittsburgh area start with the following two types of economic initiatives as well as policing/criminal justice reform:

1. The low employment, wages, and income of African Americans negatively affect all aspects of life, including crime and violence, education, housing, and family life. Employers need to: 1) end the segregation of African Americans in low-wage occupations and contract jobs, 2) increase minimum wages, 3) hire more African Americans in jobs paying over \$40,000 and jobs paying over \$100,000 a year, and 4) create thousands of quality jobs for African American youth each summer. One way to proceed is for the CEO of every major organization in the Pittsburgh area to form a committee of department heads to work continuously on designing, implementing, and evaluating initiatives.<sup>4</sup> These efforts would cover training, hiring, retaining, and promoting African American adults and youth and awarding prime contracts to African American-owned firms.
2. African American people know their needs best and how to address them. Government agencies and foundations should invest tens of millions of dollars each year in African American organizations so they can provide employment, income, food, education, healthcare, housing, and public safety services and assist with procuring income-support. This investment should include African American political, labor, and community entities that can obtain adequate responses from local, state, and national leaders by organizing, getting out the vote, and demanding change.
3. Massive reform of criminal justice in the Pittsburgh area is needed. High African American incarceration rates destroy lives, families, and communities. We need to end police targeting of African Americans for traffic stops, pedestrian stops, searches, and

<sup>4</sup> For the effectiveness of this strategy and others, see [https://hbr.org/2016/07/why-diversity-programs-fail?cm\\_sp=Magazine%20Archive--Links--Current%20Issue](https://hbr.org/2016/07/why-diversity-programs-fail?cm_sp=Magazine%20Archive--Links--Current%20Issue).

arrests. Ban all consent searches and minimize probable cause searches. End arrests for low-level offenses. Use social workers for mental health, drug addiction, homelessness, and other behavioral problems. End pretrial detention and cash bail. Reduce spending on police, jails and prisons, and other parts of the criminal justice system and invest the savings in the African American community.

If major changes aren't made in 2021, then all citizens and leaders must ask themselves why African Americans should live here. There are many urban areas in America with better African American conditions. Why shouldn't African American families, workers, and businesses leave? Why shouldn't high school graduates from here find good jobs in other urban areas or go to college in areas with better post-graduation opportunities?
